

# CALL FOR FARMERS

## Compensated study on crop production costs

**Who is needed:** Farmers growing at least one 100-foot row of lettuce, watermelon, long beans, okra, melons, wing beans, pechay/bokchoy, kangkong, squash, bittermelon, or daikon radish.

**Participation involves:**

- \$50 per week of reported data, up to 16 weeks
- Tracking and sharing your labor and material costs, yields, and sales
- Weekly check-in

Your input will be used to develop cost-of-production budgets and break-even costs for 15 of Guam's highest value crops. This data will benefit Guam's farmers in planning and pricing their crops as well as agencies that provide insurance and financial support for farmers.
